- Render and design web pages using HTML, CSS, JS and other editing software.
- Proficiency in the use of MS Office, such as Word, Excel, Publisher and PP.
- Familiarity with the use of Photoshop and Adobe Illustrator when designing postcards and photos

PROJECT(S)

I created and developed a website for the Chorale le Bon Berger Kigali based at St Michel Parish, Kigali City. I started from scratch and used python with the django framework alongside HTML, CSS and JS, as well as other editing software like VS code, Sublime and Pycharm. Whilst developing this website, I created a system where users have to register, login and logout as a better system to manage them. In addition to that, this site is composed of a blog system, where registered users can create blog posts as a further way of publishing the projects made. I hosted this site on Amazon AWS using Ubuntu EC2 instance, and I managed to deploy the project using the GitHub platform where I can work with other programmers on updating remotely.

This is the link https://github.com/ErnestRuzindana?tab=repositories to my GitHub account and you can access all the projects I've been pushing.

This link http://www.cbbkigali.com takes you to the website I have built using python django framework and hosted on AWS Amazon EC2.
